Open to remote & relocation

Full-stack software engineer with production experience shipping React, Vue 3, TypeScript, REST API design, GraphQL, and Node.js/Express in a live microservices environment. I build clean, well-documented systems and leverage AI-assisted workflows to move fast without cutting corners. Available for European and North American remote teams (UTC+0 — perfect overlap with UK/EU).

SKILLS

Languages: TypeScript, JavaScript, Python (scripting)

Frontend: React, Vue 3, Next.js, Tailwind CSS, Zustand, Context API, Chart.js

Backend: Node.js, Express.js, GraphQL, REST API design, JWT authentication

Databases: PostgreSQL, MongoDB, MySQL

DevOps & Cloud: Docker, Git, GitHub Actions, Vercel, AWS Cloud Practitioner (certified 2025)

AI & Tooling: GitHub Copilot, Claude, Claude Code, Codex, ChatGPT; integrated into daily development workflow

Blockchain: Solidity, Motoko, Rust, ICP

EXPERIENCE

Software Engineer · AmaliTech Resource Management Service *2025 – Present* ·
Kumasi, Ghana

- Engineered frontend features for a live microservice managing project staffing and resource allocation across the organisation, using Vue 3, TypeScript, and GraphQL within a production microservices architecture.
- Reduced review cycle friction by writing well-documented, component-level code that followed team conventions and passed code review first-pass the majority of the time.
- Delivered REST API modules with Node.js and Express as part of structured backend training, implementing JWT authentication and protected route patterns on production-adjacent systems.
- Collaborated in an Agile team: sprint planning, daily standups, and peer code reviews alongside senior engineers at a professional engineering organisation.

Ambassador & Technical Lead · ICP Hub Ghana *2025 – Present* · Ho, Ghana

- Won ETHAccra Hackathon competing against developer teams across West Africa, fastest end-to-end product shipped in the cohort.

- Grew the Blockchain Builders Club from an informal group to a structured programme by designing a weekly curriculum covering smart contracts, dApp architecture, and frontend Web3 integration.
- Authored technical documentation on the Internet Computer Protocol adopted by onboarded developers for independent project development.

Software Developer · One Solution

2024 · Accra, Ghana

- Delivered client-facing software features across the full development lifecycle, contributing to code reviews and cross-functional delivery against client deadlines.

Software Developer Intern · Trebnet Digital

2023 · Ho, Ghana

- Built and maintained application features under senior developer oversight; reduced onboarding time for new interns by creating internal documentation on codebase structure and workflow.

PROJECTS

Task Manager API with Authentication — *Node.js · Express · TypeScript · JWT · MongoDB*

- Engineered a production-pattern REST API covering the full auth lifecycle: registration, login, token issuance, refresh, and protected route middleware: demonstrating security-first backend design beyond basic CRUD.
- [Task Manager API](#)

Kanban Task Manager — *React · TypeScript · Zustand · Context API*

- Progressively refactored the same application across three architectural iterations local state, Context API, then Zustand- to explore tradeoffs in React state management at increasing scale. Each version is versioned separately on GitHub, showing deliberate technical decision-making.
- [Kanban Task Manager](#)

Political Data Collation Platform — *React · Chart.js · Django*

- Built the real-time data entry frontend used by field agents during a live election, dynamic forms, concurrent submission handling, and live dashboards visualising aggregated results under time pressure with actual users.

EDUCATION

B.Tech, Computer Science — GPA 3.56 / 4.00

2022 – 2025

Ho Technical University, Ghana

ACHIEVEMENTS

- ETHAccra Hackathon — Prize Winner (competing across West Africa)
- Huawei ICT Academy Practical Competition — Prize Winner
- AWS Cloud Practitioner — Certified 2025
